

WCM (World-Class Manufacturing) methodology is being used by all Fiat Group companies that have manufacturing production processes. This methodology has been identified as key in efforts to achieve sustainability and enhancing competitiveness.

Based on the most competitive aspects of the Toyota Production System and through benchmarking production systems in Europe, the WCM focused Fiat Group on the main concepts of Total Industrial Engineering (TIE), Total Quality Control (TQC), Total Productive Maintenance (TPM) and Just in Time (JIT).

The WCM program as adopted in factories is achieving important results including typical performance efficiency in equipment, reducing waste, increasing customer service level and also in the way of working in the factory and ergonomic quality in the workplace. In addition this program boosts innovation, changes through involvement, contribution and creativity from all.
